

Sales Forecasting & Demand Prediction Dashboard (Power BI Project)

This project demonstrates how businesses use Power BI dashboards for sales forecasting, demand prediction, inventory optimization, and business planning. The dashboard is designed for retail, FMCG, and e-commerce industries.

Project Objective

Develop a professional forecasting dashboard that predicts future sales using historical data trends and helps businesses improve inventory planning, production scheduling, and revenue forecasting.

Business Importance

Sales forecasting helps companies reduce stockouts, optimize inventory, improve supply chain planning, and increase forecast accuracy for better decision-making.

Key Metrics Used

- Total Sales
- Forecasted Sales
- Actual Sales
- Forecast Error %
- Demand Growth %
- Stock Availability
- Product-wise Demand
- Region-wise Demand

Dashboard Visualizations

- KPI Cards
- Forecast vs Actual Sales Line Chart
- Product Demand Analysis
- Seasonal Sales Trend
- Stock Availability Chart
- Forecast Accuracy Analysis

Data Cleaning Activities

- Handle missing values
- Remove duplicates
- Standardize categories
- Format dates
- Detect outliers
- Create Month/Quarter/Year columns

Business Insights

- Identify high-demand products
- Detect seasonal sales spikes
- Improve inventory planning
- Reduce overstocking and stockout risks

Professional Dashboard Layout

Top Section: KPI Cards
Middle Section: Forecast vs Actual Sales Charts
Bottom Section: Seasonal Trend & Stock Risk Analysis
Side Panel: Interactive Filters and Slicers

Resume Ready Description

Built a Sales Forecasting & Demand Prediction Dashboard in Power BI to analyze sales trends, forecast demand, and improve inventory planning using business intelligence techniques.

LinkedIn Showcase Caption

Excited to share my latest Power BI project: Sales Forecasting & Demand Prediction Dashboard. This project focuses on predictive analytics, demand forecasting, and inventory optimization.

Dashboard Components

Visualization	Purpose
KPI Cards	Display Total Sales, Forecasted Sales, Actual Sales
Line Chart	Compare Forecasted vs Actual Sales Trends
Bar Chart	Analyze Product-wise Demand
Map Chart	Track Region-wise Sales Demand
Heatmap	Identify Seasonal Sales Patterns

AI Dashboard Image Prompt:
Create a realistic Power BI sales forecasting dashboard with KPI cards, forecast vs actual sales line chart, regional demand map, inventory stock alerts, seasonal sales analysis, and modern corporate analytics UI.
